Michele Mozzo

Software Engineer

With a Master's in Theoretical Physics and a track record of building production React applications across multiple industries, I bring an analytical mindset to frontend engineering that goes beyond the surface. I have a strong focus on building clean, complex user interfaces and have experience taking products from early POC through to customer-facing release, working with technologies including React, TypeScript, Next.js, and GraphQL.

Work experience

Software Engineer, Ritchie Bros.

Jan 2025 - Present (Helsinki)

Frontend engineer on a large-scale marketplace platform, embedded in a cross-functional team responsible for the seller-side experience.

- Contributed to the redesign and rebuild of the seller portal alongside two other frontend developers. Delivered new pages, asset management views and financial document integration leading to a 75% reduction in internal FinOps support tickets.
- Developed a custom AI-assisted workflow using dedicated agents to streamline TDD implementation, taking features from Jira tickets and Figma designs through to tested, reviewable code.
- Collaborated closely with multiple product teams (buyer, search, and others) as well as PMs and designers to ship cohesive, production-ready features.

Technologies: React.js, TypeScript, Next.js, CircleCI

Frontend Developer, KONE

Feb 2023 - Dec 2024 (Espoo)

Lead frontend developer on a six-person cross-functional team, building a web UI to visualise real-time data within a 3D digital twin of a building. Took the product from proof-of-concept to first customer release. Solved key performance bottlenecks in 3D mesh rendering at scale and implemented live data streaming via WebSocket.

Technologies: React.js, TypeScript, THREE.js, Apollo/GraphQL, WebSocket, AWS

Junior Software Engineer, P3 Financial Group

Oct 2021 - Nov 2022 (Helsinki)

Joined directly after completing my Master's degree, gaining my first professional exposure to full-stack web development in a small team environment. Contributed to two internal applications, a form builder and a data portal.

Technologies: React.js, Next.js, MongoDB, and GitLab CI/CD pipelines under the guidance of senior developers.

Skills

Proficient in

- React.js
- TypeScript
- JavaScript
- Next.js
- CSS/SCSS
- GraphQL/Apollo
- Jest/React Testing Library

Experienced with

- AWS
- WebSocket
- Python
- Figma

Ways of working

- AI-assisted development & workflow automation
- Agile/Scrum
- CI/CD (GitLab, CircleCI)
- Code review
- Cross-functional collaboration

Education

M.Sc. Theoretical and Computational Physics
University of Trento, 2021
Thesis: Modelling electromagnetic mission from Kilonovae using computational simulations in Python

B.Sc. Physics
University of Trento, 2018
